In Scope

#. In Scope means, the feature, module of the application that the testing team will test.

#. Example:- "Functionality Testing of Login"

Out of Scope

#. Out of Scope means the feature or area that will NOT to be tested in the current testing cycle.

#. Example:- Performance Testing

Feature to be Tested

#. These are the specific functionalities of the application that the testing team will verify during testing.

#. Example:- User Registration and login

Feature not to be Tested

#. These are the functionalities that will not to be tested in the current testing life cycle.

#. Example:- Third Party Application.

Deliverables: -

#. What the Testing team delivers after or during testing.

- Test Plan

- Test Strategy

- Test Scenarios

- Test Cases

- Test Data

- RTM (Requirement Traceability Matrix)

- Defect Report

- Test Execution Report

- Test Summary Report

- Test Closure Report

Test Case Review Process: -

#. Whenever Test Engineer finished the drafting of Test Cases then he/she will it to the Test lead for review process.

#. Test Lead will send it to the business (Call it as reviewer) for the reviewing of the test cases.

#. The Reviewer checks whether all test cases /Scenarios written by the author is OK or not.

After finding mistake will send it to TL.

#. The Test Lead send it to Test Engineer, he/she will incorporate the review comments and send it again to the reviewer as well as the Test Lead.

#. Reviewer will verify the changes and send the verified report to the Test Lead.

#. Test Lead will approve the report if it is proper then store/upload it is in the Central Repository.(JIRA)

Procedure to Review Test Cases: -

1. Refer the Requirement, check whether the test case is written for that particular requirement.

2. Check whether test case is easy to understand.

3. Check whether the test cases are organized

4. check for missing scenarios, wrong scenarios and duplicate scenarios

5. check the format of Test Case i.e. header, body etc.

6. check whether all the entities are filled with appropriate attributes.

Test Case Review Ethics: -

1. Always review the content not the author.

2. Aim is to find mistakes not solutions.

3. Even after review if there are mistake found then both author as well as reviewer will be responsible

Retesting: -

#. Testing only the changes made or the defect fixed is called Retesting.

Regression Testing: -

#. Testing the unchanged feature to make sure that the changes made has not bought any impact an unchanged feature.

QA (Quality Assurance)

#. QA focuses on building the quality

#. QA is process related.

#. QA is preventing defects.

#. QA is process oriented

#. QA is for entire life cycle.

QC (Quality Control)

#. QC focuses on testing for quality

#. QC is the actual testing of the software.

#. QC is detecting defects

#. QC is product oriented.

#. QC is for Testing part in SDLC.
